

Democritus University of Thrace, Kavala, Greece School of Science Department of Informatics

Department of European and International Programmes – Erasmus+ Agios Loukas, 654 04, Kavala University Campus, Greece 0030-2510-462221 & -290 & -308

Proposed Course for incoming Erasmus students¹

Title of the Course Design Patterns ECTS credits 5 Short contents of the course This course provides a comprehensive introduction to software design patterns, focusing on reusable solutions to common design problems in software development. The course begins by exploring what design patterns are, their significance, and the foundational principles of good software design, such as flexibility, modularity, and encapsulation. Students will delve into three major categories of design patterns: Creational Patterns, which focus on the creation of objects, ensuring flexibility and reusability in the construction process. Structural Patterns, which help in composing classes and objects into larger structures while promoting code efficiency and organization. Aim of the course and target audience The aim of the course is to provide students with a deep understanding of proven design solutions that can be applied to common software development challenges. Target Audience: Computer science students who are preparing for advanced software design projects or roles in software development.
